

How it Works and Outcomes

The LegalShift and CPC team work process commences with the conduct of an assessment to understand current and future law firm business needs and work practices. This is typically followed by a granular onsite analysis utilizing expert legal process, print workflow and electronic technology resources, to gain a thorough understanding of incumbent print infrastructure and associated costs.

The outcome is a strategy to deploy a “fit for purpose” **Complete Print Solution**, incorporating the following components:

- A virtually guaranteed net double digit percentile reduction in print related expenditure
- Complete print architecture and design recommendations (including hardware, software, services and floor placement) based on YOUR specific needs
- Enterprise follow-you-print/secure release (reducing current print volumes)
- Cloud based print servers, where appropriate
- Scanning solutions
- Mobile printing
- Color print management
- Potential leverage of 3rd party outsourced services (print, copy, mailroom, etc.)
- On-site maintenance/support solutions to meet your desired quality of services
- Automated consumables management/fault report
- Detailed quarterly reporting and analytics
- Dedicated end to end consulting and account management
- Industry leading SLA's, KPI's and environmental sustainability initiatives
